LEARNING DIARY, FRONT-END COURSE

LEARNING DIARY

30.5.2022

Part 1

I checked the general information and understood the main focus of the course. I am trying to study as much as possible so I can use my front end skills in the future. I did the set up for Visual Studio, Git and node.js. Then I watched the video part 1. First video was very clear and not that much problem faced.

6.6.2022

Part 2

I watched the video and learned how to do and edit text. The big problem that I faced was how to add a background image. Finally I solved this problem. The problem was that my path was wrong. Now there is folder called dist/dist because that was only way how I really can continue my project.

8.6.2022

Part 3

I continue my project as he did on the video. I had a lot of problem I this part. Menu did not show firstly. Then I googled it and watched a lot of videos. Then I power off my visual studio and reopen project in live server, then menu looks like it should.

9.6.2022

Part 4

I did the menu overlay as on the video. That was hard part because I had problem with changes displaying. Building the navigation was a bit difficult, but I googled it and also read the YouTube comment so I get the answer from there.

10.6.2022

Part 5

I watched the videos and did the same way. Still I had a problem with responsive styling. The small portrait photo did not works as I hope. I resized it but still did not works. Now responsives are quite okay but it is not still as perfect as I hope.

11.6.2022

Part 6

I did the contact and work pages as he did on the video. I am very proud of contact page but the work pages is not that good as I hoped. First I did as he, like added some project pictures and 'projects'. Then I realized that I do not have any projects. Then I just list my working history and what I have done there.

13.6.2022

Part 7

I tried to work like on the video but it did not work. Then I tried to publish my project on the desktop but I have two accounts so the wrong account was only logged in. I didn't get any solutions to switch account so I used the server version. I just dropped my files and then published the project.
